GREEN MAMMOTH®

TRACKED FORKLIFT TP2000

PATENTED!

Many times we hear that everything has already been invented in this amazing World we live in.

Great discoveries and inventions are created by research groups consisting of Scientists who dedicate their whole life to research, and in the main operating in new technologies.

In fact, it is true that the development of a unique new product is an extremely rare occurrence; and we recognize that it is usually existing products being improved and updated, and the unique new product has been missed for a long time- or was missing!!!

Now it is true that unique product is here and HINOWA S.p.A. has invented and produced a uniquely special machine that will help to resolve all the transport and logistic problems, until now considered difficult, unsolvable and expensive.

The new invention is a TRACKED FORKLIFT and it is named **GREEN MAMMOTH®**. Traditional forklifts are universally used on building sites, in agriculture, in the gardening industry and in many other different fields to move pallets and cases.

Since the traditional wheeled forklifts are only able to work on even, paved, concrete or asphalt surfaces it is easy to understand the big limits they have because they are only able to work in large squares.

Our new tracked forklift **GREEN MAMMOTH®** can access anywhere be it gravel, sandy, muddy, snowy or uneven ground and furthermore on downhill and sloping roads, with a load capacity of 2 Tons in complete safety.

The tracked forklift **GREEN MAMMOTH®** can be transported on lorry and be unloaded with normal aluminium ramps or by the crane of the lorry itself.

The application fields are, as already mentioned, enormous and include building sites, the country, the mountains, the beach, the farms and it offers enormous opportunities in the Hire Sector.

The **GREEN MAMMOTH®** will be an irreplaceable, invaluable and economic help that will save money and time and decrease the amount of workload and increase safety at the same time.

The costs are very reasonable and if you consider the great services it will perform, it is obvious that the costs will be amortized quickly over the early months of use. Maintenance is minimal and it can be driven by all your employees.

Test it!!
